

### Criteria of performance. (How)

Quantitative or qualitative criteria against which learner's performance will be measured to determine successful learning. A criterion is a description of how well performance must be demonstrated, or a standard.

### Criteria of performance. (How)

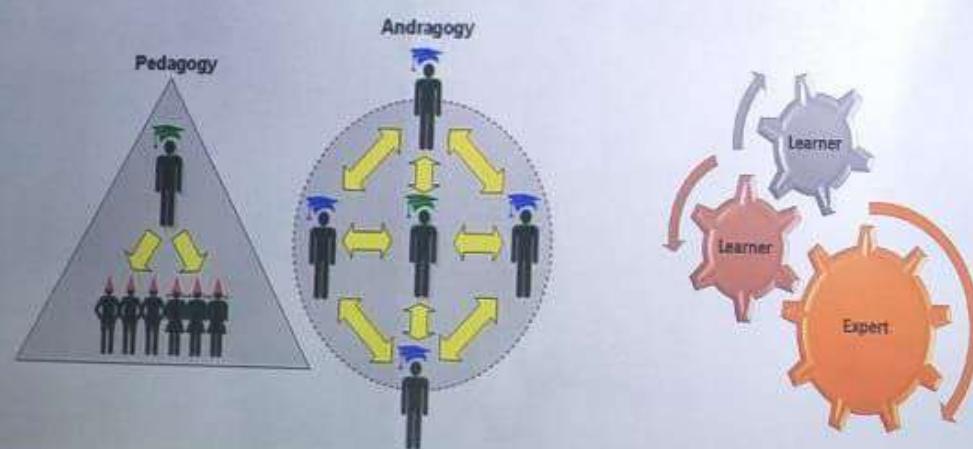

Quantitative or qualitative criteria against which learner's performance will be measured to determine successful learning. A criterion is a description of how well performance must be demonstrated, or a standard.

## Andragogy : The art and science of helping adults learn.

- Comes much later and was a term coined to refer to the art/science of teaching *adults*.
- Educating adults involves understanding adult learning principles.

Andragogy (Self-directed)	► Heutagogy (Self-determined)
Single-loop learning	► Double-loop learning
Competency development	► Capability development
Linear design and learning approach	► Non-linear design and learning approach
Instructor-learner directed	► Learner-directed
Getting students to learn (content)	► Getting students to understand how they learn (process)

In a heutagogical approach TL, learners are highly autonomous and self-determined and emphasis is placed on development of learner capacity and capability with the goal of producing learners who are well-prepared for the complexities of today's workplace.
